Login ID (what you logged into the machine with; not your ID number!):

Consider the following directory hierarchy:

Give the answers to each of the following questions. If a solution is not possible or a command would give an error, you may just answer "error".

1. What is the absolute path to the directory named "steve"?

`/users/admin/steve`

2. If you are in the directory named "staff", give a single command using a relative path to change to the directory named "steve".

`cd ../admin/steve`

3. Give the output you will see if you are in the "admin" directory and type `pwd`.

`/users/admin`

4. What will the output be if you type `ls` in the root directory?

`bin usr etc users lib`

5. You are currently in the "student" directory. What directory will you be in after the command `cd ../../etc` executes?

`etc`
